

## Sunrise Telecom Calibration Services

While your Sunrise Telecom instrument is known for its accuracy and dependability, proper care is required to keep it performing at its peak potential. When using a measuring instrument, you need to be confident that your results are accurate and precise. Sunrise Telecom calibration services deliver this type of confidence, while also increasing equipment reliability, maximization of uptime, failure prevention, documentation and budget control. Each calibrated unit is returned to you with a factory calibration certificate which maintains FCC Proof of performance (PoP), ISO requirements and industry standards.

If your equipment has not been calibrated within the last 12 months, it is time to schedule a calibration. Setting up a calibration service is easy, all that is required is the model and serial number on your equipment and we'll generate the paperwork for you.

### Calibration Certificates

The accuracy and precision of instruments relies partly on calibrations which are performed by manufacturer-trained and certified technicians. Sunrise Telecom can accommodate and give advice on calibration intervals that best suit your needs and provide certificates for full traceability.

### The benefits of the calibration certificate include:

Documented evidence that your instrument is working within manufacturer's specifications. Each calibration process is performed in strict accordance with ISO standards using certified reference materials traceable to National and/or International Standards thus ensuring compliance with ISO requirements  
Traceable history of equipment performance
