

# AVOID TRAFFIC JAMS

## Take the Metro.

Ideal for verifying the quality of voice, video, and data traffic, the new STT Metro helps keep things moving. Featuring 8 independent test ports, the STT Metro can reveal congestion and predict quality of service (QoS) before it impacts your customers and your revenue. Need to stress test your network? Metro generates dozens of traffic streams, each with independent bandwidth, priority, and type of service settings. And, with its integrated capture function, Metro gives you a window into live traffic for troubleshooting VLAN, IP, and protocol issues.
